

## **Gas Cooker Installation**

This service is available for all freestanding gas cookers, gas hobs and built-in gas ovens. These appliances can only be fitted to an existing like-for-like gas connection. All gas cooker installations are carried out by a Gas Safe-registered engineer.

### **Before selecting this installation option, please ensure:**

- Easy access to the pipework.
- Easy access to the electrical supply and that it is in good working order.
- Your new appliance will fit the existing space.
- Access to your gas meter.
- A working supply of gas to test your appliance.

### **Gas Cooker Installation includes:**

- Unpacking of your new appliance.
- Connection of your new appliance to the existing pipework and electrical supply.
- Levelling and positioning of the appliance.
- Test to see if your appliance is in full working order.

## **Electric Cookers, Hobs and Ovens Installation**

This service is available for all freestanding electric cookers, electric hobs and built-in electric ovens. These appliances can only be fitted to an existing like-for-like electrical connection.

### **Before selecting this installation option, please ensure:**

- Easy access to an electrical supply that it is in good working order.
- That your new appliance will fit the existing space.
- A working supply of electricity to test your appliance.

### **Electric appliance installation includes:**

- Connection of your new appliance to the existing electrical supply.
- Levelling and positioning of the appliance.
- Testing to make sure your appliance is in full working order.

## Range Cooker Installation

This service is available for all freestanding gas, electric or dual fuel range cookers. These appliances can only be fitted to existing like-for-like gas / electrical connections.

Any gas installation service will be carried out by our Gas Safe-registered engineers

### Before selecting this installation option, please ensure:

- Easy access to the pipework.
- Easy access to the electrical supply and that it is in good working order.
- That your new appliance will fit the existing space.
- A sufficient supply of gas and/or electricity to test your appliance.

## Things to Remember

Please bear the following in mind when you select our cooker installation service:

### Keep the 'hot zone' clear

- The area directly above your cooker/hob (within 65cm-75cm of the top of the appliance) is known as the 'hot zone'. This area **MUST** be kept clear of items that might catch fire, such as wood, wallpaper, or wiring.
- Be sure to clear your 'hot zone' before our installers arrive, as we might not be able to complete the job otherwise.

### Ensure adequate ventilation

- If you want us to install any gas appliances in your home, you will first need to make sure that the room is adequately ventilated.
- Gas safety regulations dictate that your kitchen **MUST** have a door or window that leads directly outside if a gas cooker is to be installed there.
- If your kitchen doesn't fulfil this requirement, please purchase an electric cooker instead.

### Check electricity rating

- We can only install electrical cooker if there is a **like-for-like** electrical supply available.
- Before purchasing your new cooker, please check the power supply in your kitchen and ensure that it matches the **amp rating** listed in your new appliance's specifications.
